

UTSW Specialty Medications

UTSW specialty pharmacy services are designed to help patients with complex or chronic conditions get the specialized medications and support they need. These medications are not commonly found at regular pharmacies, and they may have specific storage, handling, or administration requirements. We work closely with the patient, health care provider, and insurance company to provide coordinated care.

The specialty pharmacy staff is experienced in working with insurance companies to help patients navigate the complexities of specialty drug coverage. They can assist with prior authorization submissions, reimbursements, and searches for financial assistance programs to reduce the cost of specialty medications.

Our pharmacists are available to answer questions, provide education, and help patients understand potential side effects. Patients are enrolled in a medication management program that provides refill reminders and ongoing monitoring. Pharmacists communicate important updates, lab results, and medication changes with the clinic team for coordinated decision-making. We strive to help patients achieve the best possible outcome in their treatment journey.

* **Limited distribution drug - not available at UTSW**
‡ **Available to UTSW oncology providers only**
